Professional Summary

Flutter developer who owns mobile apps end-to-end, from architecture through Google Play/App Store release, including native Android integration for POS hardware connectivity. Shipped production apps across healthcare, fintech, and logistics, collaborating with backend teams on API design and data exchange.

Education

University of Karachi — BS in Computer Science — Jan 2021 – Dec 2024
Jauhar Degree College — Faculty: Pre engineering — sep 2018 – july 2020
The Educators School — Science group — Aug 2005 – April 2018

Experience

Software Engineer, Teknoloje Solutions — Karachi — Mar 2025 – Present

- Built and maintain a Flutter medical app (HMIS integration + secure staff-patient chat) deployed across 2 clinics, serving 1,000+ patients with ∼100 daily appointment actions; added push notifications (reminders, education, messages) and deep links into the relevant chat and patient education.
- Developed a Fin-tech Flutter app for POS bill processing, currently used by 11 merchants handling 50–70 transactions and 30–40 settlements daily; built a native Android (Kotlin) bridge via platform channels to integrate a third-party ECR SDK for direct payment terminal connectivity.
- Built a Flutter driver-tracking app (Bloc state management) broadcasting live location and stop-duration telemetry for 20–25 riders per city across 3–4 cities to a centralized ops web portal.
- Building a JSON-driven multi-tenant build config system for per-clinic app builds without code changes, as part of an in-progress Fastlane/CI-CD pipeline.

Software Engineer Intern, Teknoloje Solutions — Karachi — Jan 2025 – Mar 2025

- Developed modular, reusable Dart components using Clean Architecture, reducing duplicated code across feature modules.
- Optimized Flutter rendering and network handling for 2G/3G conditions and resolved cross-device UI/UX inconsistencies ahead of transitioning to a full-time engineering role.

Projects

Mirror App — Flutter, Kotlin, Node.js, WebSockets, MongoDB — *Personal Project*

- Built a full-stack remote screen-mirroring app (Flutter, native Android Kotlin, Node.js/Express, MongoDB) with JWT-authenticated REST APIs and time-limited PIN-based pairing between two personal devices.
- Engineered a low-latency screen streaming pipeline (MediaProjection, ImageReader) over WebSockets at ∼11 FPS with sub-second latency; fixed a native stride/padding bug causing corrupted frames, and built a demand-driven pause/resume protocol cutting battery and network usage by 70%+ when idle.

Daily Diary — Flutter, Firebase — GitHub

- Built a cross-platform journaling app (Flutter, Firebase) with mood tracking, voice/video entries, and emoji-based emotion analytics surfacing weekly mood trends.

Century Healthcare — Flutter — Playstore | Appstore

- Owned full architecture, development, and store release (Play Store & App Store) of an insurance claims app now used by 100+ active users, including biometric (fingerprint for android, fingerprint and face recognition for IOS) authentication and real-time claim status tracking.

Technical Skills

Languages & Frameworks: Dart, Kotlin, C#, Python, JavaScript, SQL, Flutter, Node.js
Messaging & APIs: REST APIs, JWT, Swagger, Postman, WebSockets
Cloud, DevOps & Databases: Git, Docker, Fastlane (in progress), MySQL, MS SQL Server, MongoDB
Practices & Domains: MVC Architecture, Clean Architecture, OOP, SOLID Principles, Clean Code, DI
